

Ideation Phase

Define the Problem Statements

Date	October 3, 2026
Team ID	
Project Name	Automated Network Request Management System
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

A worked example of one problem statement for this project (PS-3):

I am	a remote employee working off-site who needs VPN / Wi-Fi access for a newly issued laptop
I'm trying to	raise a network access request and track its progress until access is granted
But	I can't see whether it has been approved, and I'm asked to resubmit when details are missing
Because	requests move through email threads with no automatic field checks or live status updates
Which makes me feel	Anxious & left in the dark

Problem statement: I am a remote employee trying to raise and track a network access request, but I can't see its status or fix missing details quickly because requests run through email with no validation or live updates, which makes me feel anxious and left in the dark.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an enterprise employee needing network access or changes	submit a network connection request with accurate details	it takes a long time and allows submission of incomplete fields	form validations are missing and requests require manual review before approval	Frustrated & Delayed
PS-2	an IT Network Manager	review and approve pending network requests efficiently	I receive incomplete details and lack immediate visibility into request status	request details aren't automatically mapped to a database or sent via clear email notifications	Overwhelmed & Inefficient
