

Project Development Phase Model Performance Test

Date	3 October 2026
Team ID	
Project Name	Automated Network Request Management System
Maximum Marks	

Solution Performance Testing:

Project team has filled the following information in the performance testing template for the Network Request solution.

S.No.	Parameter	Values	Screenshot
1.	Solution Summary	Automated Network Request Management System built on ServiceNow. Employees raise network requests (Wi-Fi, VPN, static IP) through the Network Request catalog item in the Service Portal. Catalog UI Policies validate the form, the Flow Designer flow creates a DAT... record in u_database_tables, sends an email, asks the manager for approval and updates the record.	 <i>Fig 1: Network Request flow</i>
2.	Accuracy	Functional accuracy (test run): 3 of 3 requests created records and notifications correctly = 100%. Validation accuracy: 3 of 3 approval notifications generated = 100%. Observed on requests REQ0010002, REQ0010003 and REQ0010004.	 <i>Fig 2: Emails log – 'was created' and 'was approved' for each request</i>
3.	Fine Tuning Result (if done)	Fine tuning done on form behaviour: the ID field visibility and mandatory fields were refined with the Catalog UI Policy. Validation result after tuning: 100% of test requests accepted with valid data (3/3).	 <i>Fig 3: Catalog UI Policy – Hide/Show of ID field</i>
