

Project Development Phase Model Performance Test

Date	3 October 2026
Team ID	
Project Name	Automated Network Request Management System
Maximum Marks	10 Marks

Solution Performance Testing:

Project team has filled the following information in the performance testing template. Regression / classification metrics are replaced by functional and performance metrics that apply to the Network Request automation project.

S.No.	Parameter	Values	Screenshot
1.	Test Metrics	Requests submitted in testing: 3 (REQ0010002, REQ0010003, REQ0010004) Creation notifications generated: 3 of 3 Approval notifications generated: 3 of 3 End-to-end success rate: 100% (3/3 requests processed by the flow without failure) Automation speed: REQ0010003 was created at 02:55:14 and its approval email was generated at 02:55:15 (about 1 second). Estimated delivery time shown on the catalog item: 2 days	 <i>Fig 1: Emails log – created / approved notifications</i>  <i>Fig 2: Request Summary</i>

2.	Tuning / Optimization	Tuning applied: Catalog UI Policy 'Hide/Show of ID field' tuned so that the existing-ID field appears only for Existing connections. Flow approval branches configured: Approved and Else both update the Database Tables record. Email body tuned as dynamic HTML with request and RITM numbers. Validation Method: end-to-end functional validation – submit the request in the Service Portal, check the flow execution, then verify the record and emails in sys_email.	 <i>Fig 3: Catalog UI Policy</i>  <i>Fig 4: Dynamic HTML email body (sys_email)</i>
