

Project Development Phase Performance Test

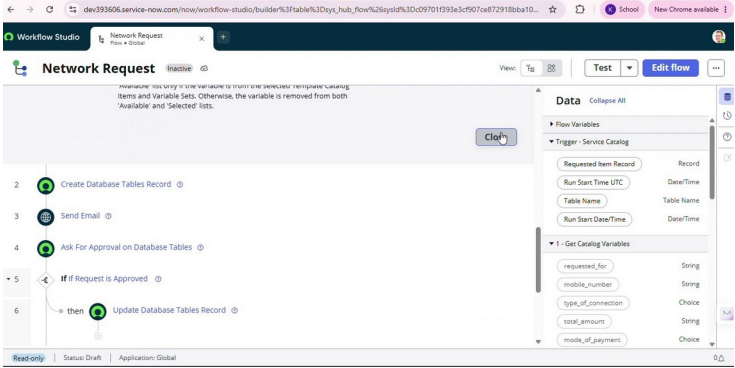

Date	3 October 2026
Team ID	
Project Name	Automated Network Request Management System
Maximum Marks	

Solution Performance Testing:

Project team has filled the following information in the performance testing template for the Network Request solution built on ServiceNow.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Request data submitted from the Network Request catalog item is rendered in the custom table u_database_tables (Database Tables). The table has 16 columns, including Database Number (DAT... auto-number), Mobile Number, Mode of Payment, Customer Address, Total Amount and Assignment to.  <i>Fig 1: u_database_tables – columns of the custom table</i>

2.	Data Preprocessing	The catalog item exposes 7 variables (Requested For, Mobile Number, Type of Connection, Enter your existing Id, Total Amount, Mode of Payment, Address) plus the Requester Information variable set. The flow's 'Get Catalog Variables' action maps these inputs before the record is created.  <i>Fig 2: Network Request catalog item – variables and variable set</i>
3.	Utilization of Filters	Catalog UI Policy 'Hide/Show of ID field' is applied on the catalog item: the existing-ID field is shown only when Type of Connection = Existing and is hidden for New connections, so only relevant fields are mandatory. List filters: Emails list filtered with 'Created on Today' and sorted by Subject to verify notifications.  <i>Fig 3: Catalog UI Policies tab – Hide/Show of ID field</i>

4.	Calculation fields Used	Auto-number: the DAT prefix generates the Database Number for every new record in u_database_tables; each order also generates REQ... and RITM... numbers. Flow data pills: requested_for, mobile_number, type_of_connection, total_amount and mode_of_payment feed the 'Create Database Tables Record' action; Approval Status is set to Approved / Rejected by the flow.  <i>Fig 4: Flow – Create Database Tables Record (field mapping)</i>
----	-------------------------	---

5. Portal design (Service Portal /sp)

No of Portal Screens - 4: Home (How can we help?), Search results, Network Request form (with Order Now / Add to Cart / Save as Draft) and Request Summary (REQ number, stage, estimated delivery).

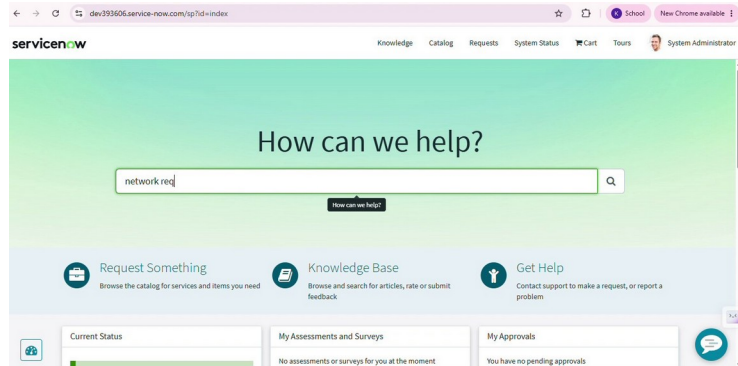

Fig 5: Service Portal home

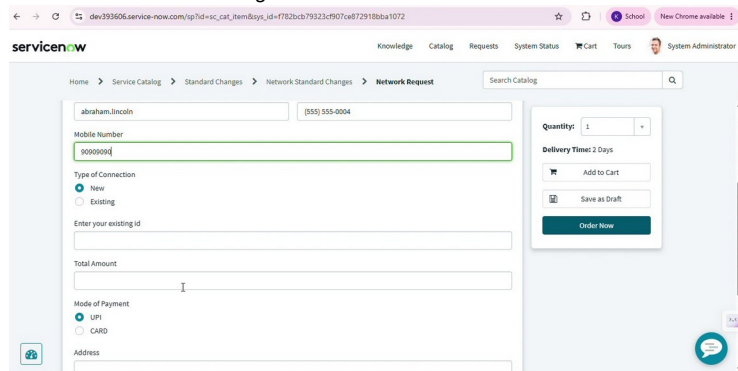

Fig 6: Network Request form

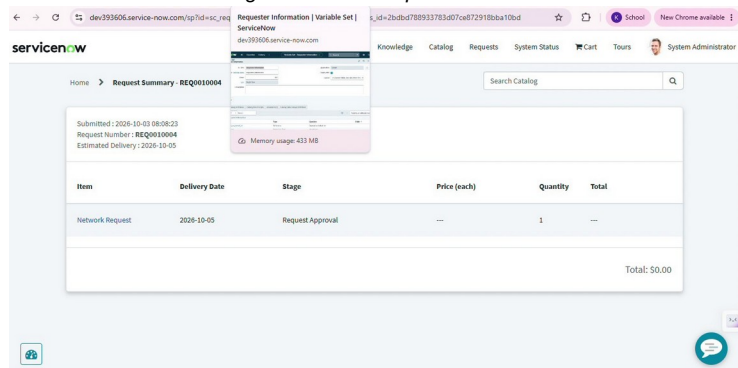

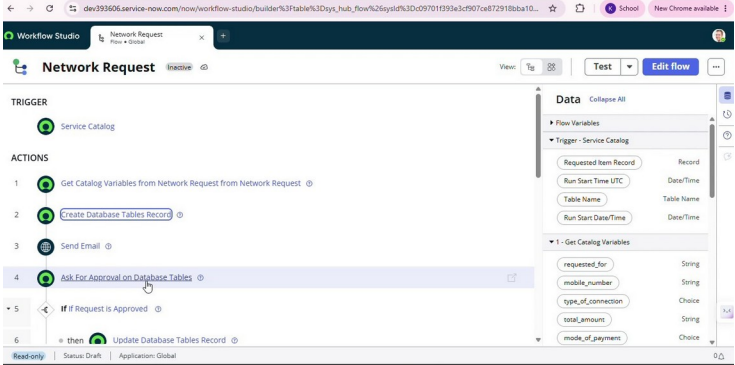

Fig 7: Request Summary (REQ0010004)

6	Flow design (Flow Designer)	No of Flow Actions - 6, plus 1 approval condition: Get Catalog Variables, Create Database Tables Record, Send Email, Ask For Approval on Database Tables, Update Database Tables Record (If Request is Approved) and Update Database Tables Record (Else).  <i>Fig 8: Network Request flow – trigger and actions</i>
